15/25kV	200A Deadbreak Bail	150TB4
---------	---------------------	--------

Applications:

The ELASTIMOLD® 150TB4 bailing assembly kit consists of three stainless steel collars and three lengths of stainless steel strap. This bailing assembly was designed to secure two ELASTIMOLD® straight receptacles K151SR and an ELASTIMOLD® straight plug K151SR and an ELASTIMOLD® tee connector K150T, or two straight receptacles K151SR to an in-line junction K150S. NOTE: For the K150S, only two of the three straps and collars are used. The 150TB4 minimizes any possibility of separation of the assemblies due to cable movement.

Ratings:

Not Applicable-Mechanical Connections
