

# Consolidation Point Boxes

## SPECIFICATIONS

Consolidation point boxes shall be used with low profile under floor systems and vertical and horizontal wall mount applications. The boxes shall accept up to 24 modules. The box shall have top and bottom cable access with removable panels that include grommets to keep out debris.

## TECHNICAL INFORMATION

|                  |                                                                                                    |                   |                   |
|------------------|----------------------------------------------------------------------------------------------------|-------------------|-------------------|
| Attributes:      | Height<br>in. (mm)                                                                                 | Width<br>in. (mm) | Depth<br>in. (mm) |
|                  | 1.7 (43)                                                                                           | 10.9 (276)        | 10.7 (271)        |
| Mounting option: | Vertical or horizontal wall mounting or low profile raised floor system (minimum depth of 1.7 in.) |                   |                   |
| Packaging:       | Box includes 24-port label and four Tak-Ty <sup>®</sup> cable ties                                 |                   |                   |

## KEY FEATURES AND BENEFITS

|                        |                                                                               |
|------------------------|-------------------------------------------------------------------------------|
| Modularity:            | Accepts all Mini-Com <sup>®</sup> modules; individual modules snap in and out |
| Removable plate:       | Removable grommet plate for greater cable density                             |
| Center metal supports: | Supports raised floor panels                                                  |
| UL 2043 approved:      | Suitable for use in air handling spaces                                       |

## APPLICATIONS

The consolidation point box is designed to work in under floor systems with a minimum depth of 1.7 in. The box can also be wall mounted vertically or horizontally as a consolidation point. Consolidation point boxes save time and money by reducing the amount of time required to complete moves, adds and changes.

Troubleshooting is also simplified as the connections can be tested and certified before installation.

### Consolidation Point Box

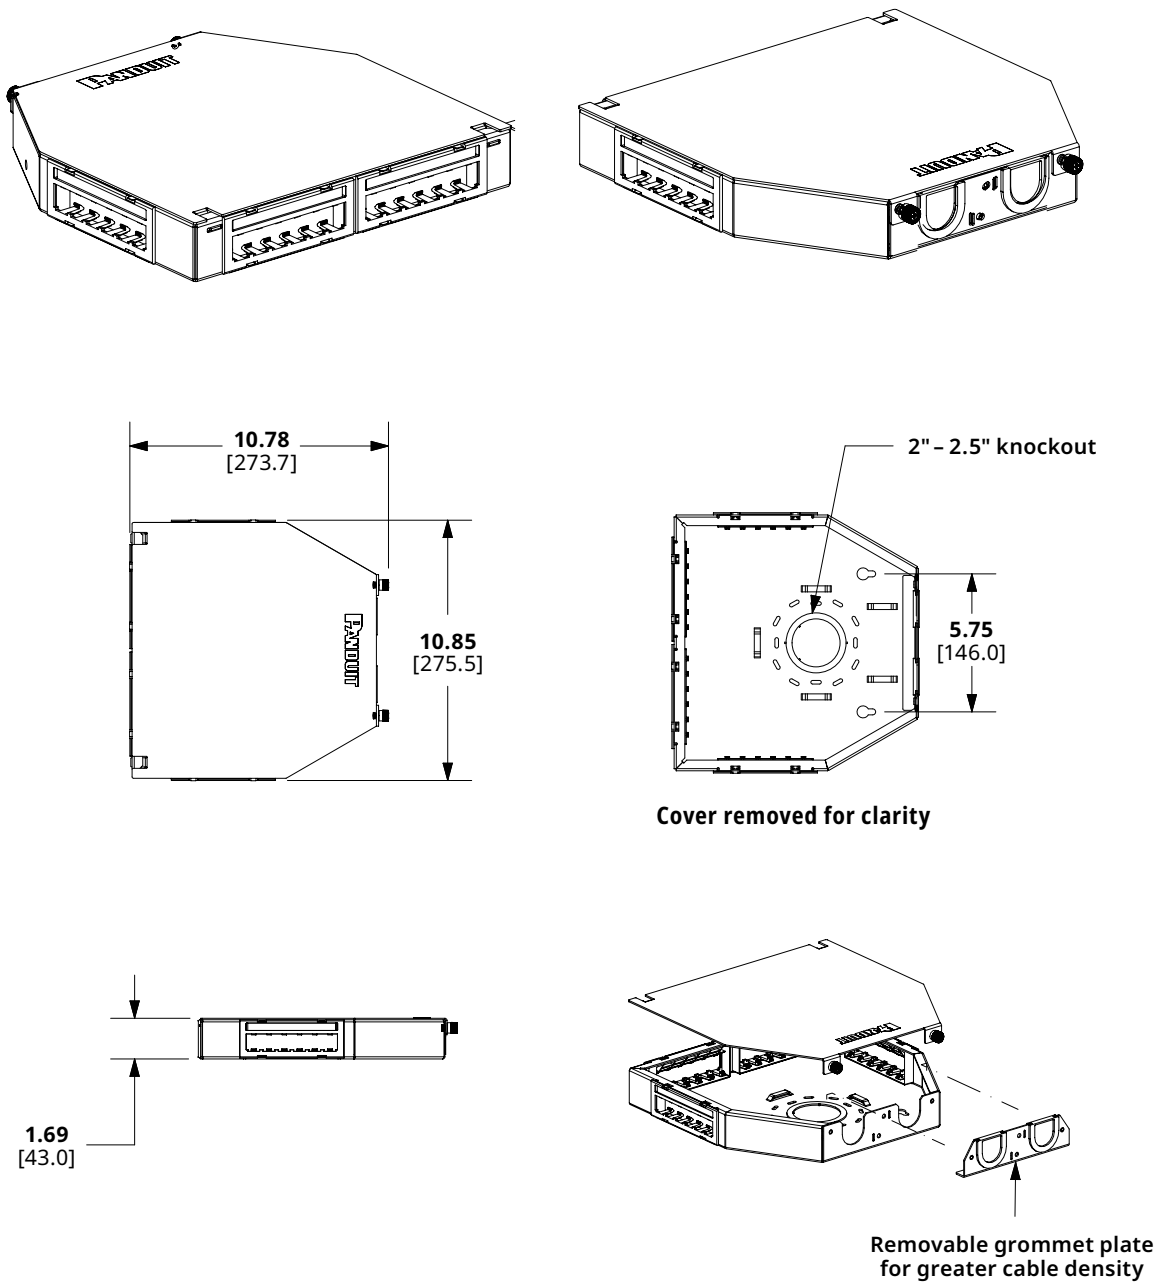

24-port consolidation point box: CUFMB24BL

### Mini-Com<sup>®</sup> Modules

See [panduit.com](http://panduit.com) or catalog for complete listing of modules for copper, fiber, and audio video installations.
