Magnetic Airflow Control Panels *MPC Series*

Reusable magnetic panels that block unused fan openings and help direct airflow for improved rack cabinet cooling efficiency.

TAA COMPLIANT

RoHS

Key Features and Benefits

- 3mm thick flexible magnetic panels provide a quick, reusable way to cover unused vents and fan openings without tools or permanent modifications.
- Helps control and direct airflow, improving cooling efficiency by preventing air from bypassing equipment through unused openings.
- Reduces unwanted airflow paths that can contribute to hot spots and inefficient cabinet cooling.
- Ideal for temporarily sealing unused fan openings during cabinet reconfiguration or staged equipment deployments.
- Positioned wherever needed on compatible steel surfaces.
- Magnetic strength securely holds the panels in place while remaining safe for nearby electronic equipment.
- Easily removed and repositioned as airflow requirements change.
- Compatible with Hammond rack cabinets, wall cabinets, and other steel enclosures with fan openings or ventilation slots.

The MPC Series Magnetic Airflow Control Panels provide a fast, reusable solution for managing airflow inside rack cabinets and equipment enclosures. By covering unused fan openings and ventilation areas, the magnetic panels help direct cooling air where it is needed most, improving cooling efficiency and reducing unwanted air bypass. Unlike tape or permanent covers, the panels install in seconds and can be repositioned as equipment layouts change.

Ideal for data centers, telecommunications rooms, industrial control cabinets, and AV installations, the MPC Series gives installers an easy way to fine-tune cabinet airflow without modifying the enclosure. Whether temporarily blocking unused fan locations or optimizing cooling performance, these reusable magnetic panels provide a simple and flexible airflow management solution.

Where the MPC Series Works Best

- Rack cabinets with unused fan openings.
- Data centers and network equipment rooms.
- Telecommunications cabinets.
- Industrial control enclosures.
- AV and broadcast equipment racks.
- Cabinets where airflow patterns change over time.

Best Applications

- Covering unused fan cutouts.
- Redirecting airflow to critical equipment.
- Improving cabinet cooling efficiency.
- Temporarily sealing fan openings during equipment upgrades.
- Optimizing airflow in high-density rack installations.
