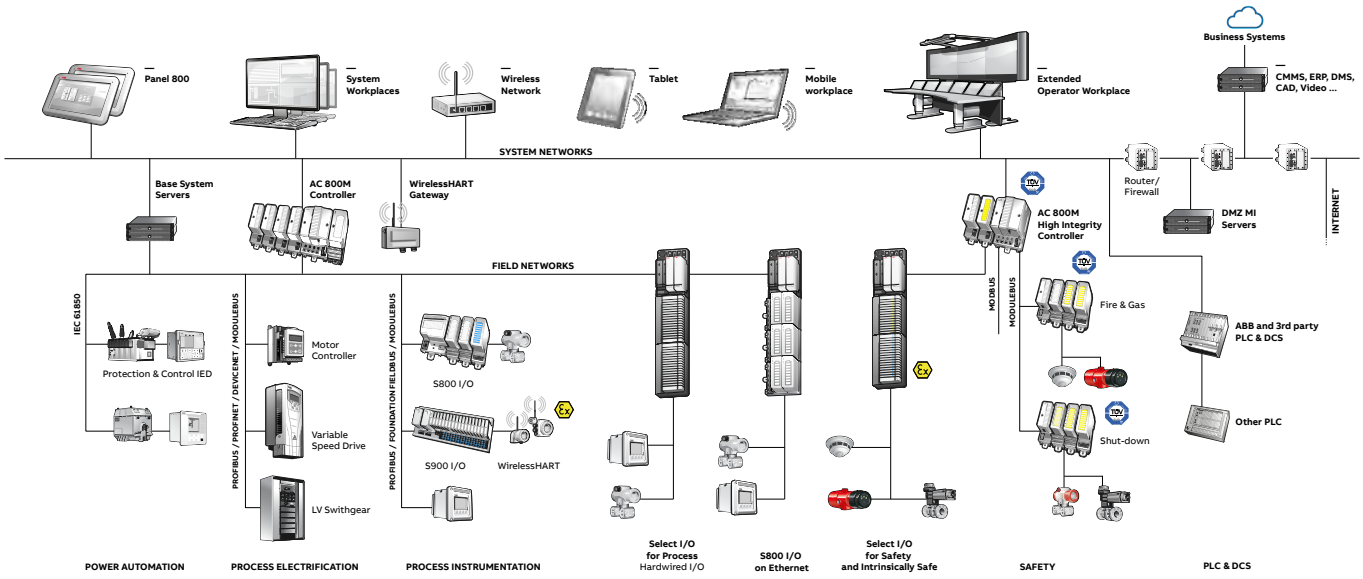
ABB Ability™ System 800xA® Extended Automation



System 800xA® is not only a DCS (Distributed Control System) it's also an Electrical Control System, a Safety System and a collaboration enabler with the capacity to improve engineering efficiency, operator performance and asset utilization.

Promoting collaboration
Collaboration between people and systems is a necessity to increase engineering efficiency, asset utilization, energy savings, and operator effectiveness. System 800xA's 'xA' stands for Extended Automation and utilizes the system architecture which was built for collaboration.

System 800xA® is the only automation platform that has the ability to engineer, commission, control, and operate automation strategies for process, power, electrical and safety in the same, redundant, reliable system. Also, facilitating collaboration is System 800xA's pre-integrated applications such as a full featured historian, asset optimization, batch management and much more.

System 800xA®

ABB's award winning System 800xA provides you with a better way to achieve measurable productivity and profitability improvements. System 800xA extends the scope of traditional DCS systems to include all automation functions in a single operations and engineering environment; enabling your plants to perform smarter and better at substantial cost savings.

Embracing the principles of open, real-time networking, System 800xA provides a scalable solution that spans and integrates loop, unit, area, plant, and inter plant controls. From providing a secure foundation with robust, but flexible, base level regulatory and sequence control to higher level management and advanced control functions that include safety controls,batch management, maintenance management, information management, and network management solutions, System 800xA meets the application needs of a wide variety of industries.

System 800xA provides you with a secure, reliable control environment with minimum effort through built-in security features such as access control, user authentication, and audit trail capability. ABB enhances secure system operations by actively participating on security standards committees, conducting threat-modeling studies, and incorporating "safe design" practices into product development.

Based upon the Aspect Object technology and a common set of hardware, System 800xA seamlessly integrates traditionally isolated DCS and Safety systems. SIS realization is achieved by either utilizing individual controllers or through dedicated applications within the same controller. With this embedded control and safety architecture, System 800xA reduces costs significantly; achieving the objectives of both systems – maximum plant availability at minimum risk.

System 800xA
System Capabilities

System 800xA from ABB is a control system that enables plant wide collaboration between people, systems and equipment. System 800xA utilizes a system architecture built for collaboration in a fully redundant, reliable environment.

Removing the barriers in traditional distributed control systems, System 800xA provides a collaboration environment that is required to increase productivity while reducing risk and total cost of ownership.

System 800xA Software

The system installation is supported by the Automated Installation program. The Automated Installation program is a shell framework to ease the installation and configuration of your 800xA System.

Installation is never prevented due to lack of licensing, but licenses are required to unlock features for operating or engineering the system. Updates and security related software from non-ABB companies must be downloaded and installed separately, as guided from the Automated Installation program.

The Automated Installation program is supplied on the 800xA media box. The common part is to specify the system details of your system in the Automated Installation program System Planner and generate a unique setup package for each node (workstation) describing what should be installed from the 800xA media box, or a file server, onto each node, and how it should be configured.

The System 800xA Installer is installed on each node, and then the following steps are executed to install and configure your node:

- Windows configuration
- System Verifier tool
- System installation
- System configuration

The setup-files may also reside on the file server. Windows configuration configures the environment (IP address, hostname, Windows components, and Windows services) connect to the workgroup or domain. The System Verifier tool checks for the necessary 3rd party software and where installations are required.

License

The central licensing system (CLS) is local to each system. Each system is ordered separately, and a separate license file is fetched for each system from the Software Factory. This also means that each system is managed individually updates and upgrades, as well as initial system installation.

The software or hardware described in the document is furnished under a license and may be used, copied, or disclosed only in accordance with the terms of such license.

Automation Software Maintenance Program

Automation Software Maintenance Program
Automation Software Maintenance is the control system life-cycle support program and is aimed at providing services for the maintenance, continuous enhancement and evolution of the ABB installed base of control systems.

Each and every control system under Automation Software Maintenance can make use, depending on the active subscription mode, of the following main program deliverables listed below.

Software Updates and upgrades
Automation Software Maintenance users have the exclusive right to receive control system software updates and upgrades:

- An Automation Software Maintenance agreement, at the appropriate agreement mode, provides access to software patches, technical corrections, roll-ups, service packs, firmware updates, feature packs, software updates, upgrades and software for control system evolution purposes.

- The Automation Software Maintenance user, at the appropriate agreement level, is entitled to newer licensed software versions of the installed control systems products as they are released. This right gives the user access to software upgrades and enhancements for System 800xA.

Cyber and IT security reports and updates
Automation Software Maintenance users have the exclusive right to access IT security validation reports, ABB reviews, tests and validates on a regular basis Microsoft security updates and 3rd party virus scanner software for compatibility with the 800xA control system.

Automation Software Maintenance users will have access to all available cyber and IT security reports and updates for application as needed in order to ensure that the running control systems are better protected against any security risks which are encountered more often now than ever before.

Each and every control system must be under Automation Software Maintenance before making use of the published IT security validation reports.

Expert product technical support
Automation Software Maintenance users have access to ABB expert and R&D support organizations. This support is being provided for troubleshooting of product defects and issues they encounter during the validity of the subscription.

Control System Lifecycle Management Program and System identifier

Control System Lifecycle Management Program

Control System Lifecycle Management Program	
	Automation Software Maintenance is the ABB control system lifecycle management program for the Extended Automation, Freelance, Compact Product Suite, Symphony Plus and OCS product lines. ABB recommends its customers to use Automation Software Maintenance for all its installed control systems. With this program, customers can keep control software up-to-date and maintain a flexible path forward to new system software technology. It provides services to maintain and continually advance and enhance your ABB control system installation. You may choose the level of maintenance and upgrade support that works best for your immediate needs and long-term production targets. Read more about our Automation Software Maintenance Program and its many valuable services here: **new.abb.com/control-systems/service/offerings/service-agreements** Please contact your local sales representative for detailed information on the program and on how to order Automation Software Maintenance subscriptions.

System Identifier

800xA System Identifier		Article no.	
	800xA System Identifier 6.1.1 System identifier, used as identifier for each individual 800xA system. The ID must be used when ordering hardware and software to a system. After ordering this item a system license in design phase can be downloaded from SOFA.	2PAA122435R1	

System 800xA 6.1.1

Base System

System 800xA Base System

The base system is used as the base for 800xA production system, mulitsystem integration subscriber system and as Read only system. Tags can be added to all these systems.

Only one type of subscriber tags (ie. subscriber tags or read only subscriber tags) can be added to a subscriber system. A subscriber system can not be converted from read only to read and write and vice versa.

800xA Base System 6.1.1		Article no.	
	Includes one Operator Workplace, one Engineering Workplace, AC800M Connectivity, Redundant Aspect Server + 10 Asset Monitors, Plant Explorer, Logging of Operator actions, Topology Status Viewer, Softpoint Server, Scheduler, Primary History Logs (logging of signals for Operator trends).

Subscriber System Tags

Subscriber System Tags	
	Tags in the subscriber system in a Multisystem Integration configuration. These tags are Object with a faceplate that collects data from a provider system. Subscriber tags are only required in the subscriber system. Subscriber tag is required for every provider tag that needs to accessed from graphics, alarms, trends etc, in a subscriber system. Note that non-redundant Multisystem Subscriber Tags can not be mixed with Multisystem Subscriber Redundant Tags. Note that Multisystem Subscriber Tags can not be mixed with Multisystem Read Only Subscriber Tags.

Multisystem Subscriber Tags		Article no.	
	Tags in the subscriber system in a Multisystem Integration configuration. Systems with > 60.000 tags require a Temporary Sales Authorization (TSA).		
	100 Multisystem Subscriber Tags 6.1.1	2PAA122264R1	
	1,000 Multisystem Subscriber Tags 6.1.1	2PAA122265R1	
	10,000 Multisystem Subscriber Tags 6.1.1	2PAA122266R1	

Multisystem Subscriber Redundant Tags		Article no.	
	Tags in the subscriber system in a Multisystem Integration configuration. Enables tag access through redundant Connectivity Servers. Systems with > 60.000 tags require a Temporary Sales Authorization (TSA).		
	100 Multisystem Subscriber Redundant Tags 6.1.1	2PAA122267R1

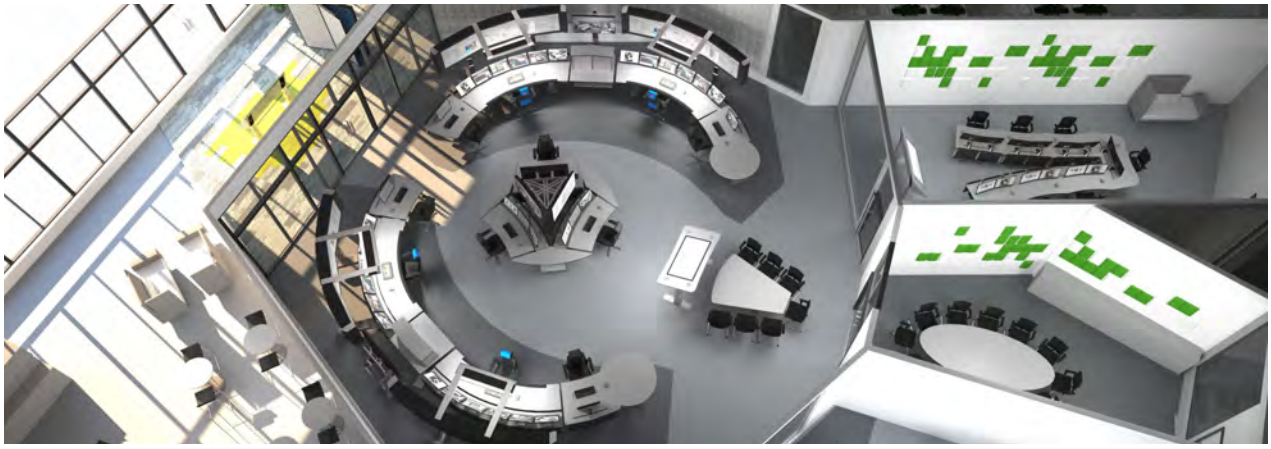
Operations
Control Room Solutions

Control room operators make hundreds of decisions every working day – decisions that have a great impact on productivity, quality, and safety. What's more, the more alert, stimulated and harmonious they are, the better the decisions they make. For plant and control room managers, the key question is thus how to create and maintain operator well-being at levels that ensure their very best performance.

An operator environment designed with human factors in focus can convert potentially dangerous fatigue and distraction into proactive alertness that extracts the very best from every in-dividual – in both routine operations and critical situations. Operator well-being is a key success factor for safe, productive and reliable operations.



24/7 control room solutions designed for the long-run and built to last
Equipment such as Control room equipment, chairs, desks, sound absorbers, cap desks, operator desks and other adjacent accessories. The equipment is marketed along an extensive knowledge about control room design and human factors. Collaboration is a key word and is used from a workflow perspective, analyzing operations in normal and critical situations and how collaboration is enhanced through design are interesting values for the end user operations. The equipment itself might not be the main competitive advantage, but in combination with their know-how this offering is highly interested to almost any projects.

By involving ABB in a control room pre-study, you get the unique possibility to create a control room environment that perfectly suits your needs and individual situation of operations. The pre-study focuses on human factors interacting with 800xA and uses high standard control room equipment in a very cost efficient way.

Operator information overviews are built to match the physical dimensions and personal preferences of each individual. With motorized sit/stand desk-height, screen adjustment options, light and sound settings, each environment represents the ultimate in form and function. Designed to keep operators alert even during calm or monotonous periods, the desks and auxiliary products are bio-mechanically optimized, appealing to use and built to last.

The main purpose of this Product guide is to give a good overview and understanding of products specified to be used with 800xA. The offering includes other desk series and adjacent equipment suitable for 24/7 environments. To fully comply with project specification, we are able to customize desk to meet the desired requirements. Please contact ABB Control Room Solutions for support.

The Control Room Solution offering is being expanded due to our acquisition of CGM, a company that specializes in control room design and products.

Some products will remain visible in the Wizard for configuration purposes. During a transition period we kindly request you to use e-mail for orders and requests. The offering is available as hardware only, in a separate price book named Control room solutions.

Please send all questions related to control room solutions to **SE-cgm-info@abb.com**.

800xA History Signals – Logs		Article no.	
	History signals capable of storing actual and historic values retrieved from 800xA, Heritage ABB DCS systems and OPC sources. The signals include logging, trending, calculations, Alarm and Events, and archiving. A signal is any numeric (Boolean, Integer or Real) data stored in the 800xA History Server.		
	800xA History signals – 100 logs 6.1.1	2PAA122333R1	
	800xA History signals – 1,000 logs 6.1.1	2PAA122334R1	
	800xA History Signals – 15,000 logs 6.1.1	2PAA122335R1	

800xA Dual History Signals – Logs		Article no.	
	History signals for parallel logging in two history servers. Each signal includes logging, trending, calculations and archiving for parallel logging in two history servers. A signal is any numeric (Boolean, Integer or Real) data stored in the 800xA History Server. The number of dual history signals should match the number of history signals that should be logged in two servers.		
	800xA Dual history signals – 100 logs 6.1.1	2PAA122336R1	
	800xA Dual History Signals – 1,000 logs 6.1.1	2PAA122337R1	
	800xA Dual History Signals – 15,000 logs 6.1.1	2PAA122338R1	

Data access to 800xA History Signals		Article no.	
	External access to History data via OPC and ODBC connectivity. Access to both the current and the historical data from 800xA History. (Same size as total number of 800xA History Signals).		
	800xA History Data Access – 100 logs 6.1.1	2PAA122339R1	
	800xA History Data Access – 1,000 logs 6.1.1	2PAA122340R1	
	800xA History Data Access – 15,000 logs 6.1.1	2PAA122341R1

IM Historian Server

IM Historian Server		Article no.	
	IM Historian Server 6.1.1 Logging of signals for Operator trends is included in the core system for up to three months. Logging for a longer time period, archiving to external media like DVD, discs or web based Historian tools require Historian server. 500 logs are included.	2PAA122342R1	

History Logs		Article no.	
	Each signal to be logged counts as one log.		
	100 History Logs 6.1.1	2PAA122343R1	
	1,000 History Logs 6.1.1	2PAA122344R1	
	15,000 History Logs 6.1.1	2PAA122345R1	

Dual History Logs		Article no.	
	Each signal to be logged counts as one log, for parallel logging in two history servers. (Two Basic Historian Servers are required).		
	100 Dual History Logs 6.1.1	2PAA122346R1	
	1,000 Dual History Logs 6.1.1	2PAA122347R1	
	15,000 Dual History Logs 6.1.1	2PAA122348R1	

Consolidated History Logs		Article no.	
	Each signal to be logged counts as one log, for consolidated logs collect data from multiple History Servers and store it in a single location. This provides a common history repository for viewing and reporting.		
	100 Consolidated History Logs 6.1.1	2PAA122349R1	
	1,000 Consolidated History Logs 6.1.1	2PAA122350R1

Historian Display and Reporting Options		Article no.	
	Display Builder for MDI – Additional Client 6.1.1 Provides the ability to create Multi-Display Interface (MDI) information displays for desktop applications.	2PAA122352R1	
	Multi-Display Interface (MDI) – Additional Client 6.1.1 Provides the ability to view Multi-Display Interface (MDI) information displays on any PC Desktop (max 64 per server)	2PAA122353R1	
	Desktop Trends – Additional Client 6.1.1 Provides trend viewing for desktop applications. Includes web enabled trend display for long and short term history and stock ticker like viewer. (Max 64 per Server)	2PAA122354R1	

Historian Data Access Options		Article no.	
	Excel Data Access 6.1.1 To access historical data through SQL from third party applications. Used to access historical data in Excel from non-800xA PC''s. For 800xA Client PC's Excel Data Access is included. (Max 64 per Server)	2PAA122355R1	
	ODBC Historic Server 6.1.1 Open Database Connection (ODBC) server which is needed for applications e.g. Batch Report that utilize commercial third party reporting tools. It includes 3rd party code (one per server). ODBC Clients are purchased separately from the ODBC server.	2PAA122356R1	
	ODBC Client Connection 6.1.1 Open Database Connection (ODBC) client which is needed for applications e.g. Batch Report that utilize commercial third party reporting tools. The number of client connections required is based on whether the applications utilize the connection directly or indirectly. If the connection is made indirectly (using Oracle), then the client connection requires only one. If the client connections are direct, then the number of clients should equal the number of concurrent users. ODBC Clients are purchased separately from the ODBC server (max 10 per ODBC server).	2PAA122357R1

800xA
Process Industries Application Libraries

Process Industries Application Libraries	
	The Process Industries Application Libraries (PIAL) in this book include Process Control Device Library (PCDL), Process Control Equipment Library (PCEL) and ProBase Library. One valid license is required per 800xA system. User documentation is provided electronically with the product media. The licenses support use with System 800xA. These licenses entitle license holders to use the library in one system, meaning one Aspect Server. Please refer to System Guide Ordering and Licensing for more information.

	Media for this product can be downloaded from ABB Library and MyABB/MyControlSystem.

Process Control Device Library

Process Control Device Library	
	The 800xA PC Device Library provides device-level objects. The PCDeviceLib is a customized library for the process industry. It builds upon the 800xA - AC800M library to provide additional functionality and engineering efficiency. Benefits include minimizing the initial learning curve for the ABB Ability™ System 800xA Extended Automation and to minimize the engineering effort. The PCDevice Library contains an extensive list of objects, but it is licensed only by the number of Control Elements used. Control Elements are the Valves, Motors and PID Loops in a system. The following PCDevice library control modules are categorized as Control Elements – Valve, ValveMan, MotorOnOff, MotorOnOffAdv, Motor2Speed, MotorVarSpeed, ControllerPIDLoop, ControlValvePneumatic, ControlValveElectric, ChokeValve, MotorOnOffCore, Motor2SpeedCore, MotorVarSpeedCore, ControlValvePneumaticBAsic, MotorOnOffBasic, MotorVarSpeedBAsic and ValveBasic.

Process Industries Application Libraries

Process Control Device Library Licenses	**Article no.**	
Base Process Control Device Library 6.1.1 The PCDevice Library comes with all PCDevice library objects but only the 17 objects listed above are counted as Control Elements. To arrive at the correct number of Control Elements to purchase, count the number of Valve, Motor and ControllerPIDLoop objects associated with the project. Includes 500 Control Elements for PCDL versions 6.1-6 or above versions when used in system 800xA 6.1.1 or above versions. Includes 125 Control Elements for all other PCDL versions and other system 800xA versions. PCDL versions 6.1-6 or above include the Interlock Viewer, Effect Viewer packages along with Process Control Device Equipment Library (PCDeviceEqLib) which is a non-batch equipment library provided with core modules to build all types of equipment control modules.	2PAA122421R1	

Additional Control Device Library Licenses

Additional Control Device Library Licenses	**Article no.**	
Additional Control Elements for PCDL 6.1.1 Additional Control Elements for Process Control Device Library (PCDL). Includes 500 additional Control Elements for PCDL versions 6.1-6 or above versions when used in system 800xA 6.1.1 or above versions. Includes 125 additional Control Elements for all other PCDL versions and other System 800xA versions.	2PAA122422R1	

PCDL Application Engineering

PCDL Application Engineering		Article no.	
	PCDL License for Application Engineering 6.1.1 This license is intended to use for Application Engineering purpose only. A maximum of 2500 Control Elements will be issued as a part of the license. For production system, appropriate quantity of Control Elements license must be purchased separately.	2PAA122423R1	
	PCDL Additional License for Application Engineering 6.1.1 Each additional license comes with 2500 control elements license.	2PAA122424R1	

Process Control Equipment Library

Process Control Equipment Library

Process Control Equipment Library (PCEquipmentLib) is a comprehensive library of Equipment Module templates, and toolkit components for System 800xA.
PCEquipmentLib is designed to optimize the specification and building of ANSI/ISA-88.01-1995 style Equipment Modules and customized Process Units. Designed to "plug and produce" with standard PCDeviceLib control objects, PCEquipmentLib shares common terminology, engineering principles, and naming conventions to make engineering consistent and easy. It is a requirement to use a compatible version of PCDevice Library in conjunction with PCEquipment Library. Refer to PCEquipment Library release notes for appropriate version information.
The PCEquipment Library contains an extensive list of pre-engineered and validated objects like Unit template and Standard Phases, equipment modules, Quality Monitor, pcc supervision, EqTimer, Prompts/PromptsAlarmOwner etc. The PCEquipment Library also contains pre-engineered facility automation Solution objects.

Process Control Equipment Library Licenses

Process Control Equipment Library Licenses	Article no.	
Base PC Equipment Lib. - Batch 6.1.1 This license is for working with up to 500 PCDevice Lib Control Elements with Batch Management when used with PCDL versions 6.1-6 or above in system 800xA 6.1.1 or above versions. For other PCDL and system 800xA versions, upto 125 PCDevice Lib Control Elements can be used with Batch Management. This license shall allow using any number of PCEL Batch Unit type with Standard Phases. Requires Symbol Factory license for PCFacility Library, which is to be ordered separately. Please refer to Release Notes for details.	2PAA122425R1	
Base PC Equipment Lib. - Non-Batch 6.1.1 This license is for working with up to 500 PCDevice Lib Control Elements without Batch Management when used with PCDL versions 6.1-6 or above in system 800xA 6.1.1 or above versions. For other PCDL and system 800xA versions, upto 125 PCDevice Lib Control Elements can be used without Batch Management. This license shall allow using any number of PCEL Equipment Module (EM) types with Device Summary and ModeControl. Requires Symbol Factory license for PCFacility Library, which is to be ordered separately. Please refer to Release Notes for details.	2PAA122426R1	

Additional Control Equipment Library licenses

Additional Control Equipment Library Licenses

It is a requirement to use a compatible version of PCDevice Library in conjunction with PCEquipment Library. Refer to PCEquipment Library release notes for appropriate version information. Additional expansion licenses can be purchased. When ordering additional licenses, the original quantity and the license information must be included with the expansion order.

Process Control Equipment Library Batch 6.1.1	Article no.	
Additional PC Equipment Lib. - Batch 6.1.1 Each single expansion license is for working with up to additional 500 PCDevice Lib Control Elements with Batch Management when used with PCDL versions 6.1-6 or above in system 800xA 6.1.1 or above versions. For other PCDL and system 800xA versions, up to 125 additional PCDevice Lib Control Elements can be used with Batch Management.	2PAA122427R1	
Additional PC Equipment Lib. - Non-Batch 6.1.1 Each single expansion license is for working with up to additional 500 PCDevice Lib Control Elements without Batch Management when used with PCDL versions 6.1-6 or above in system 800xA 6.1.1 or above versions. For other PCDL and system 800xA versions, up to 125 additional PCDevice Lib Control Elements can be used without Batch Management.	2PAA122428R1	

PCEL Application Engineering

PCEL Application Engineering		Article no.	
	PCEL License for Application Engineering 6.1.1 This license is intended to use for Application Engineering purpose only. A maximum of 20 PCEL With Batch Management license quantity will be issued as a part of this license, which can be used with both Batch and Non-Batch version of PC EquipmentLib.	2PAA122429R1	
	PCEL Additional License for Application Engineering 6.1.1 Each additional license comes with 20 PCEL license, which can be used with both Batch and Non-Batch version of PCEquipmentLib.	2PAA122430R1	

ProBase

ProBase	
	ProBase is a set of System 800xA libraries with industry specific functionality targeting liquid process handling or other applications where routing, storage of material, CIP, etc. are a major concern in the application. Example industries are food & beverage, chemical, pharmaceuticals, tank farms, etc.

Localization

National Language Support (NLS) is intended for the localization of the operator interface to the desired language. NLS contains a set of functions that are harmonized with the Windows regional settings to enable a multilingual environment for the System 800xA.

The System 800xA supports translations, mainly the operator interface and the operator manuals as shown in the Table 3 and Table 4. The translation, or System 800xA Language Package, is implemented as a system extension and is possible to install without stopping the system.

The NLS Localization Guide describes what and how localization can be performed by a project with or without an installed Language Package. The English version of the Windows operating system is required. The System 800xA Language Packages can be downloaded free of charge from ABB Library.

It is always advisable to download full Language Package from ABB Library or advised, for each new installation to secure the latest updates for language packages.

Table 3. Supported Language Packages for Functional Areas

NLS language packs: NLS language is EN (English) by default. Other NLS Languages (Arabic, Chinese, French, German, Russian, Spanish and Swedish) are made available within 12 months after the initial software version release. The order in which they are created is driven by global project requirements.

AC 800M Processor Units

CPU Modules

Several CPU modules are available that vary in terms of processing power, memory size, and redundancy support. Each CPU module is equipped with built in Ethernet port(s) for communication with other controllers and for interaction with operators, engineers, managers, and higher level applications.

These ports can be configured for redundancy for those cases where availability is of paramount importance. It is also equipped with two RS-232C ports that can be used for point-to-point communication with programming/debugging tools and with third-party
systems and devices.

The AC 800M HI controllers are SIL3-rated, IEC 61508-certified, TÜV and ISASecure certified.

The AC 800M controller can be configured with 800xA control builder. When configured with the 800xA control builder AC 800M becomes a tightly integrated part of the System 800xA.

Communication & I/O Modules

To each CPU module, a number of communication and I/O modules can be added, for example:

- Additional RS-232C ports
- DeviceNet
- Ethernet IP
- Foundation Fieldbus HSE/H1
- IEC 61850
- MasterBus 300
- MODBUS TCP
- OPC UA
- PROFIBUS DP, PROFINET IO
- S100 I/O
- S800 I/O
- S800L I/O
- S900 I/O
- S800 on Ethernet
- Select I/O

IEC 61850

In order to develop the IEC 61850 configuration in projects, for example creating and editing Substation Configuration Description (SCD) files, one must purchase the IEC 61850 Engineering Tool. The IEC 61850 Engineering Tool is licensed separately from System 800xA licenses, and one license can be used in several projects.

Please refer to Ref. Doc 2PAA113852 for more details on how to purchase and license it. For order of IEC 61850 related products, local organizations must comply with the Demands on the Purchaser to secure successful sales of IEC 61850 with System 800xA. Ref doc, 3BSE058798.

Select I/O

Select I/O is an Ethernet networked, single channel granular I/O system for the ABB Ability™ System 800xA automation platform. Select I/O helps decouple project tasks, minimizes the impact of late changes and supports standardization of I/O cabinetry ensuring automation projects are delivered on-time and under budget.

S800 I/O Modules

S800 I/O is a comprehensive and modular process I/O system that communicates with parent controllers either direct connected using the Modulebus or over industry-standard field buses. Thanks to its broad connectivity it fits a wide range of process controllers from ABB and others.

By permitting installation in the field, close to sensors and actuators, S800 I/O reduces the installation cost by reducing the cost of cabling. And thanks to features such as hot swap of modules, on-line reconfiguration and redundancy options, it contributes to keeping production – and thereby profits up.

S800 I/O features include:
- Comprehensive coverage
- Flexible configuration and installation
- Ease of set up
- Reliability and accuracy
- HART pass-through
- Redundancy also on I/O module level
- High Integrity I/O modules certified to SIL3
- High accuracy time tagging
- Defined outputs at communication errors
- I/O modules with Intrinsic Safety interfaces

With its cost-effective design and just 59 mm depth installation, S800L I/O modules are the perfect choice for PLC applications. Robust mechanics, one-piece handling, easy mounting and smart connections save your time in all phases of installation. The comprehensive S800 I/O system consists of more than 40 different module types to respond to every need. Classification of corrosive protection, electrical safety, hazardous location and marine certification brings the possibility to install S800 I/O in a wide variety of applications. S800 I/O is installed with more than 40 million channels worldwide.

AI890	8 channels, single-ended, 0(4)-20 mA, 12 bits, transmitter power supply.
AI893	8 channels, TC: 7 + ref. junction, sep. returns. TC types B, C, E, J, K, L, N, R, S, T, U, -10…80 mV. RTD: Pt50-1000, Ni100-500, Cu10-100, resistor 0-4000 W, 3-wire. 15 bits + sign.
AI895	8 channels, single-ended, 4-20 mA, 12 bits, transmitter power supply, HART pass-through.
AO890	8 channels, common return, 0(4)-20 mA, 12 bits, load: 725 ohms short-circuit-proof.
AO895	8 channels, common return, 4-20 mA, 12 bits, load: 725 ohms short-circuit-proof, HART pass-through.
Redundant modules	
DI840	16 channels, common return, 24 V d.c., current sink, extended diagnostics, time-tagging, current limited sensor supply.
DP840	8 channels, common return, 0.5-20 kHz, 12/24 V d.c or NAMUR, extended diagnostics, wire-fault detection.
DO840	16 channels, common return, 24 V d.c., max. 0,5 A, transistor, current source, short-circuit-proof, extended diagnostics.
AI843	TC input, 8 channels + ref. junction. TC types: B, C, E, J, K, L, N, R, S, T, U, -30…75 mV, 16 bits, extended diagnostics.
AI845	8 channels, 12 bits, 0(4)-20 mA 0(1)-5 V, extended diagnostics, HART pass-through, current limited transmitter supply, single ended.
AO845A	8 channels, 12 bits, common return, 4-20 mA, extended diagnostics, HART pass-through, 750 ohms.
Redundant modules - HI Integrity	
AI880A	8 channels with HART, 0(4)-20 mA, 12 bits, SIL3, current limited transmitter power.
DI880	16 channels, 24V d.c, SIL3, current limited sensor power, time-tagging.
DO880	16 channel, 24 V d.c., 0.5 A, SIL3, Current sourcing, current limiting

S800L I/O Modules

S800L modules	
DI801	16 channels, 1 group, 24 V d.c., current sink.
DI802	8 channels, 110 V d.c., 150 V a.c.
DI803	8 channels, 220 V d.c., 230 V a.c.
DO801	16 channels, common return, 24 V, max 0.5 A d.c., transistor, current source, short-circuit-proof.
DO802	8 channels, 5-250 V, max 2 A a.c./d.c., relay (N.O.).
AI801	8 channels, single-ended, 0(4)-20 mA, 12 bits.
AO801	8 channels, common return, 0(4)-20 mA, 12 bits, load: less than 750 ohms.
Accessories	
TU805K01	For DI801 & DO801. With field power distribution screw terminals. For two or three wire connection.

Function	Module termination unit (MTU) for single configuration of Optical ModuleBus Modem TB840/ TB840A. The MTU is a passive unit having connections for power supply, a single electrical ModuleBus, one TB840/TB840A and a rotary switch for cluster address (1 to 7) setting.	Module termination unit (MTU) for redundant configuration of Optical ModuleBus Modem TB840/ TB840A. The MTU is a passive unit having connections for power supply, double electrical ModuleBus, two TB840/ TB840A and a rotary switch for cluster address (1 to 7) setting.	Module termination unit (MTU) for redundant configuration of Optical ModuleBus Modem TB840/ TB840A, for use with non-redundant I/O. The MTU is a passive unit having connections for power supply, a single electrical ModuleBus, two TB840/TB840A and a rotary switch for cluster address (1 to 7) setting.	Module termination unit (MTU) for redundant configuration of the field communica-tion interface CI840/CI840A and redundant I/O. The MTU is a passive unit having connections for power supply, two electrical ModuleBuses, two CI840/ CI840A and two rotary switches for station address (0 to 99) settings.	Module termination unit (MTU) for redundant configuration of the field communication interface CI840/ CI840A. The MTU is a passive unit having connections for power supply, electrical ModuleBus, two CI840/CI840A and two rotary switches for station address (0 to 99) settings. A ModuleBus Optical Port TB842 can be connected to TU847 via TB806.	Module termination unit (MTU) for redundant configuration of Optical ModuleBus Modem TB840/ TB840A. The MTU is a passive unit having connections for two power supply (one for each modem), double electrical ModuleBus, two TB840/ TB840A and a rotary switch for cluster address (1 to 7) setting.	Module termination unit (MTU) for redundant configuration of Optical ModuleBus Modem TB840/ TB840A. The MTU is a passive unit having connections for two power supply, one for each modem, a single electrical ModuleBus, two TB840/ TB840A and a rotary switch for cluster address (1 to 7) setting.	Module termination unit (MTU) only for connecting S800 I/O modules to the Modulebus connector. Two mounting slots for redundant CI845 Ethernet FCI modules. Two mounting slots for redundant Ethernet Adapters. Not intended for functional safety applications. Also suitable for installation in hazardous areas classified as Zone 2 or Class I, Division 2.

S800 I/O

Extended warranty for S800 I/O Hardware

Extended warranty for S800 I/O Hardware	
	We can offer an extended warranty for one, two, three or four years in addition to normal warranty conditions for S800 I/O Hardware. See price list Extended Warranty - AC 800M, S800 & S900 I/O.

S800 I/O

ISA-S71.04 level G3 Compliance

ISA-S71.04 level G3 Compliance	
	Modules are compliant to ISA-S71.04 level G3, unless explicitly stated differently.

Field Communication Interface

Field Communication Interface		Article no.	
	**CI801 ProfiBus FCI S800 interface** Including: 1 pce Power Supply Connector 1 pce TB807 Modulebus Terminator The basic system software loaded in CI801 does not support the following I/O modules: DI825, DI830, DI831, DI885; AI880A, DI880 and DO880.	3BSE022366R1	
	**CI840A Profibus DP-V1 Interface.** For redundant communication interface two CI840A, and one TU847 or one TU846 must be ordered.	3BSE041882R1	
	**CI845 Ethernet FCI module** Ethernet Fieldbus Communication Interface Module for connection of S800 I/O or Select I/O to Ethernet. For redundant configuration two Fieldbus Communication Interfaces CI845, two Ethernet Adapters TC810 and one TU860 or one TU865 are needed. For Select I/O High Integrity SIL3 one HI880 is needed.	3BSE075853R1	
	**TU846 MTU for CI840** For 1+1 CI840 Supporting redundant I/O. Vertical mounting of modules. Including: 1 pce Power Supply Connector 2 pcs TB807 Modulebus Terminator	3BSE022460R1	
	**TU847 MTU for CI840** For 1+1 CI840 Supporting non-redundant I/O. Vertical mounting of modules. Supporting non-redundant I/O. Including: 1 pce Power Supply Connector 1 pce TB807 Modulebus Terminator	3BSE022462R1	
	**TU860 MTU for Ethernet FCI** Ethernet Fieldbus Communication Interface Module Termination Unit for connection of single or redundant S800 I/O. Supports single or redundant Ethernet Fieldbus Communication Interface Module and single or redundant Ethernet Adapter. Mounting on vertical DIN-rail. Including: 1 pcs TL814K01 Empty slot protector HI module 2 pcs TB807 Modulebus terminatore	3BSE078710R1	
	**TC810 Ethernet Adapter for Ethernet FCI** Ethernet Adapter for copper media with built in 2-port switch. Hosts two RJ45 ports. Use as single or redundant.	3BSE076220R1	
	**TC811 Ethernet Adapter Single Mode Fiber** Ethernet Adapter for single mode fiber with built in 2-port switch. Hosts two LC ports. Use as single or redundant.	3BSE078714R1

S900 Remote I/O System

The S900 remote I/O system communicates with System 800xA or other controllers over PROFIBUS. Suitable for applications in the chemical, pharmaceutical, oil and gas industries, S900 I/O can be installed in hazardous areas, thereby reducing marshalling and wiring costs.

Further maintenance savings can be achieved through S900's extended diagnostics and the use of HART®-compliant field devices.

Three series of S900 I/O are available:
- S-series for applications in Zone 1 hazardous areas
- B-series for applications in Zone 2 hazardous areas
- N-series for applications in non hazardous areas

Additional solutions for specific applications are available:
- Field housing - for wall mounting and field mounting in Zone 1 installations with system approval fully certified in accordance with ATEX. The high-grade steel housing is prepared for wall-mounting with facility for insulated screen rails or terminals.

The S900 components are based on a passive backplane suitable for mounting on a DIN rail or directly in a sub-distribution board. The passive backplane includes internal bus communication, terminals for field circuits, communication, and power supply. The function modules are plugged into the backplane in their appropriate slots.

The redundant backplane has two slots for power supply units, two slots for communication interfaces, and 16 slots for function modules. Digital function modules have up to 8 channels, analog modules up to four. Therefore, when using a redundant backplane, 128 digital or 64 analog channels can be connected per station. In the case of the S and B series, up to ten S900 stations can be connected on a single fieldbus line.

Key S900 benefits include:
- Intrinsically safe - can be installed in Zone 1 and Zone 2 areas.
- Good price/performance ratio because external barriers have been removed and costs are reduced in terms of cabling, installation, hardware, and maintenance.
- Easy configuration using either FDT/DTM or GSD files, allowing easy integration with System 800xA process control systems.
- High availability of the plant thanks to redundancy and hot-swap capability of all components during operation.

B series	In Zone 2	In Zones 2, 1 and 0 (intrinsically safe signals)	ATEX Zone 2 (Blue TU921B)
N series	In safe areas	In safe areas	No * (Black TU921N)

* Field devices mounted in Zone 1/Zone 0 can be connected to N-Series with additional IS barriers; a benefit of IS modules of S- and B-Series.

Field Housing S900-FH660S

General Information	
	The Ex e field housings FH660S from stainless steel (1.4301) serves for the reception of one redundant termination unit (backplane) TU16R-Ex (Order-No. TU921S) as well as further components with ATEX-certification for the hazardous area in zone 1. Dimensions 600x600x300 mm / for max 100 field cables The field housings are pre-mounted with stopping plugs instead of cable glands. The cable glands have to be ordered separately at manufacturer Hummel or manufacturer Bimed. To fulfill the ATEX-certification the following cable glands are recommended: **Manufacturer Hummel:** • Type HSK-M-EMV-Ex M16 (article no. 1646160050) • Type HSK-M-EMV-Ex M20 (article no. 1646200051) • Type HSK-M-EMV-Ex M32 (article no. 1646320050) **Manufacturer Bimed:** • Type EBS M16 (article no. Fieldbus Network

FOUNDATION Fieldbus Network Components

FOUNDATION Fieldbus HSE/H1 Linking Device	
	LD 810HSE links the FOUNDATION Fieldbus HSE protocol to the FOUNDATION Fieldbus H1 protocol and vice versa. Up to 4 external powered H1 lines can be connected to one LD 810HSE. Two LD 810HSE can be combined to a redundant set of devices. In this case the Redundancy Link cable is required.

Linking Devices		Article no.	
	**LD 810 HSE EX Linking Device** LD 810 HSE EX module for DIN rail mounting with 4 H1 links and one HSE connector. The module itself needs external 24 VDC power supply. H1 links must be powered separately. Restrictions: Linking Device LD 810HSE Ex is not suitable for replacing one of the LD 800 Linking Devices in a redundant pair. To clarify, both devices in the redundant pair must be replaced with LD 810HSE Ex. Redundancy cable for LD 810HSE Ex can be made / procured by the end customer directly & need not be ordered through ABB.	3BSE091722R1

Panel 800 version 6.2

Panel 800 is a user-friendly, intuitive and ergonomic operator panel that combines slim, space saving dimensions with a comprehensive range of advanced functions.

Panel 800 family comprises of user-friendly, intuitive and ergonomic operator panels that combine slim, space-saving dimensions with a comprehensive range of advanced functions.

Adding to the already well established feature rich Panel 800 version 6.2 our new Rugged and Black panels are designed to perform in challenging harsh environments.

Whether it is heavy outdoor use, usage in areas with explosion risk, or ship bridge use in marine applications, they are ready to provide you with the information needed.

Designed to make process automation easy, all panels are equipped with advanced functionality for process and equipment control, maneuvered by touching the LCD display.

Combined with market-leading performance and stunning graphical ability, Panel 800 erodes the line between ordinary Operator Panels and PC-based HMIs.

Panels are configured using ABB's Panel Builder tool that contains a wide range of advanced functions. The functions are tested and developed with customer needs and preferences in focus.

Lifecycle Management Program

Lifecycle Management Program	
	Automation Software Maintenance is the ABB control system lifecycle management program for the Extended Automation, Freelance, Compact Product Suite, Symphony Plus and OCS product lines. ABB recommends its customers to use Automation Software Maintenance for all its installed control systems. With this program, customers can keep control software up-to-date and maintain a flexible path forward to new system software technology. It provides services to maintain and continually advance and enhance your ABB control system installation. You may choose the level of maintenance and upgrade support that works best for your immediate needs and long-term production targets. Read more about our Automation Software Maintenance Program and its many valuable services here: new.abb.com/control-systems/service/offerings/service-agreements Please contact your local sales representative for detailed information on the program and how to order Automation Software Maintenance subscriptions.

System 800xA Networks
Control. Monitor. Communicate.

System 800xA Networks provide pre-configured network components that are tested with System 800xA to ensure top quality performance and provide protection against cyber threats.

Wired switches (NE800) - includes a set of rack- and DIN-mounted switches and a wide range of modular transceivers.

Redundant Network Routing Protocol (RNRP) routers are available as part of the System 800xA Networks portfolio developed for use with System 800xA.

System 800xA Networks enables you to take control of your network infrastructure, and benefit from the full potential of a robust, highly performing, and secure 800xA system.
